The application has been amended as follows:

Claim 22 (Currently Amended). A packaged integrated circuit structure comprising:

a stack including a pair of integrated circuit chips, a first cooling integrated circuit chip between said pair of integrated circuit chips, a second cooling integrated circuit chip on one of said integrated circuit chips, said first and second cooling integrated circuit chips including microchannels for the circulation of a cooling fluid;

a package receiving said stack, said package having formed therein an inlet fluid reservoir and an outlet fluid reservoir to communicate with said microchannels; and

a path to recycle fluid from said outlet fluid reservoir to said inlet fluid reservoir.

Art Unit: 2822

Claim 32 (Currently Amended). A packaged integrated circuit structure comprising:

a pair of heat generating integrated circuit chips including temperature sensors within said integrated circuit chips;

a cooling integrated circuit chip between said pair of heat generating integrated circuit chips, said cooling integrated circuit chip including microchannels for the circulation of a cooling fluid;

a package containing said integrated circuit chips; and

a controller; and

electroosmotic pumps, said temperature sensors to selectively operate said electroosmotic pumps to cool particular regions of said heat generating integrated circuit chips.
